

## Assignment 2

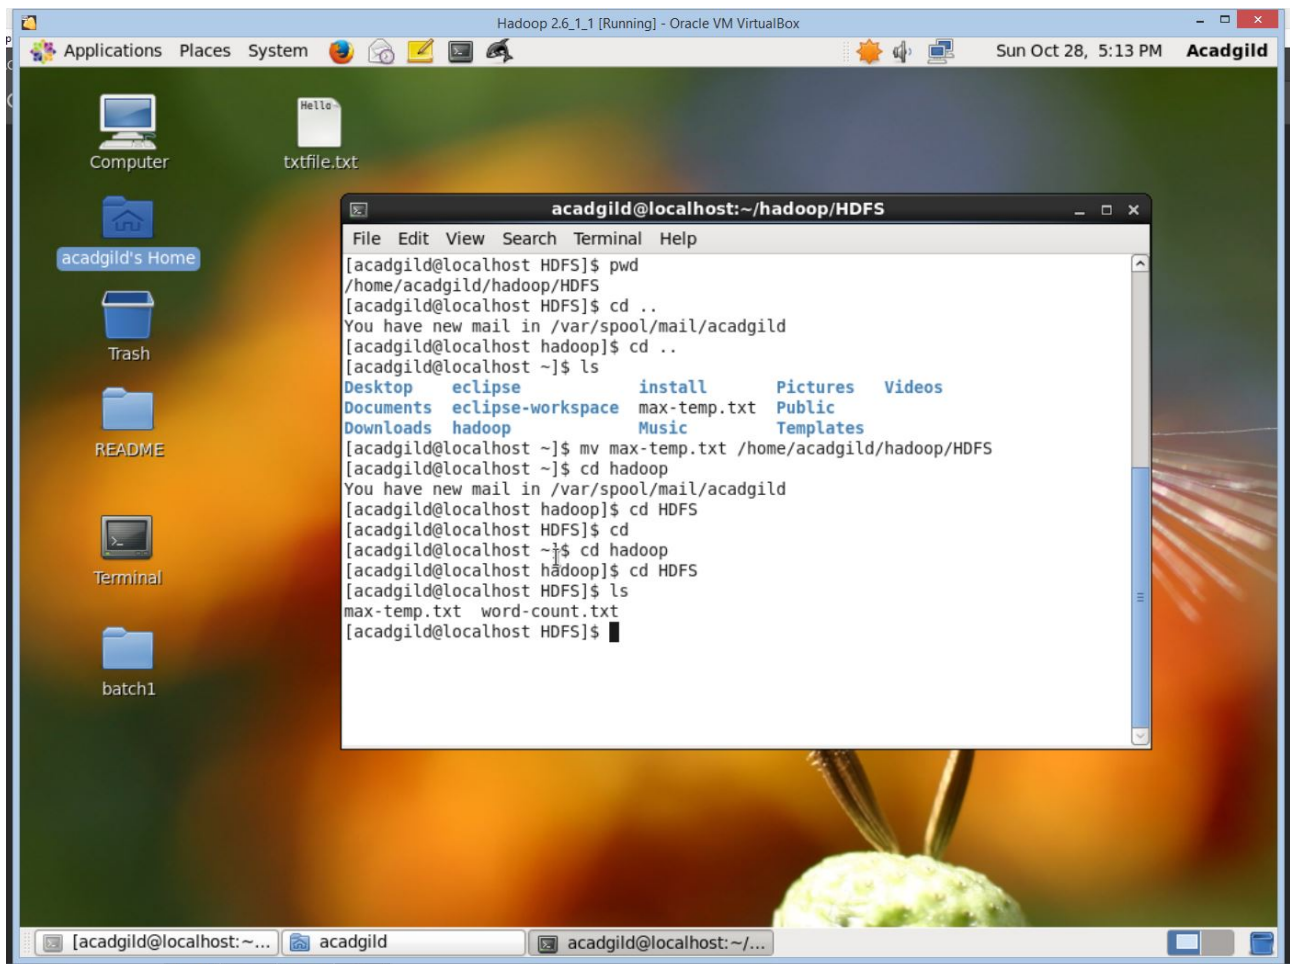

- Creating the HDFS directory using mkdir command

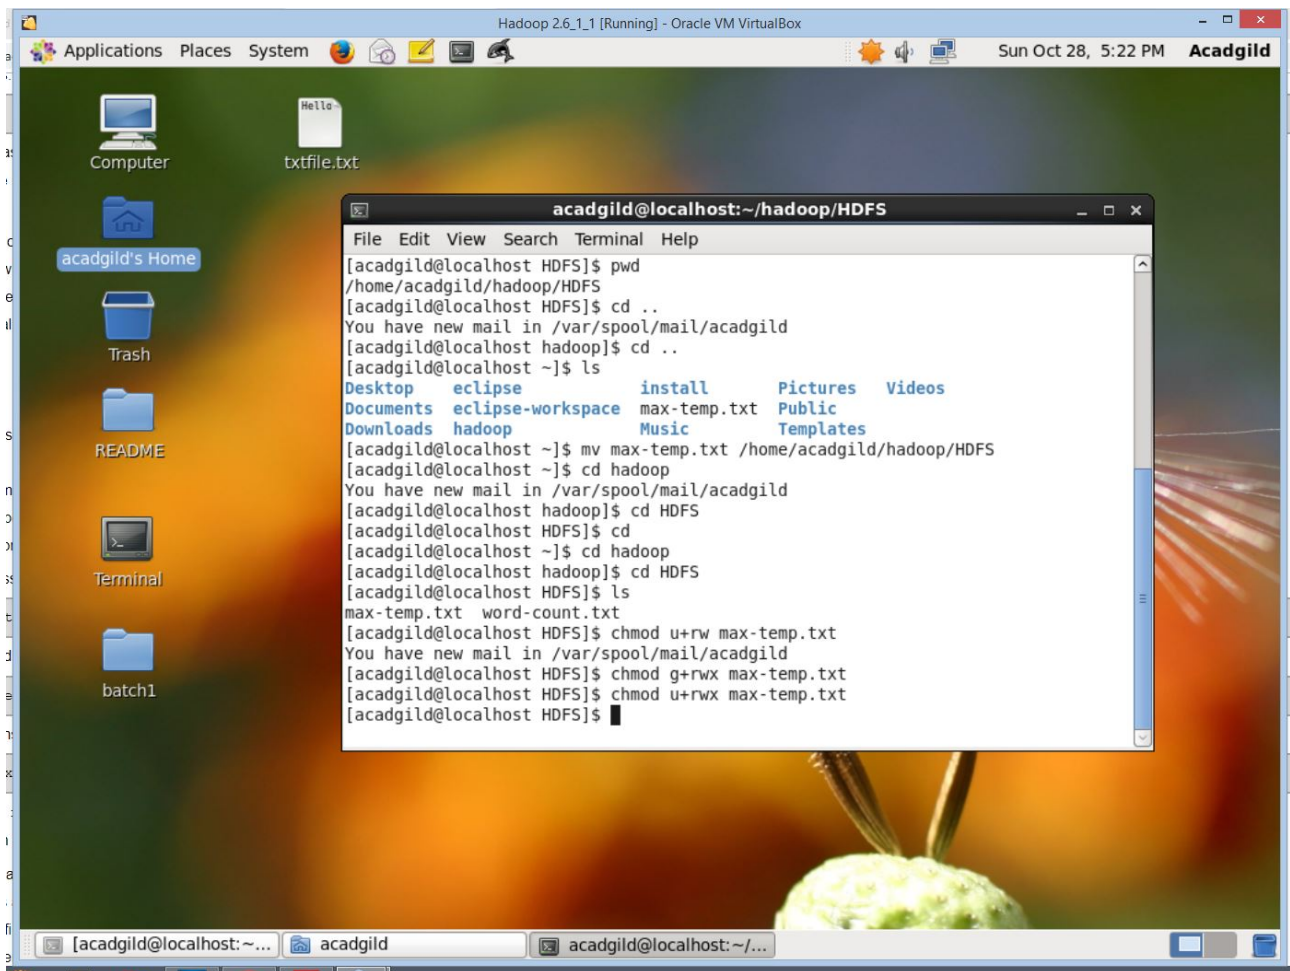

- Creating the word-count.txt file using nano command.

- Creating the max-temp.txt file using nano command
- cat command is used to print the file

- max-temp.txt file is moved to HDFS directory using mv command

- The permission of the max-temp.txt file is changed using chmod command, where g is group, u is user and r,w and x stands for read, write and execute respectively.

### Assignment outcome:

This assignment helped me to learn in detail about creating a directory and moving files from one to another and also how to modify the permission of a given file.
